Our Services

Software solutions with hardware integrated

In today's connected world, the synergy between software and hardware has become increasingly evident, offering opportunities for innovation and advancement. It is our forte to develop software solutions that integrate closely with hardware devices. Over a period of time, we have integrated hardware like IOT devices (i.e. switch boards, solar pumps, electric n RFID devices, etc. to name a few), smart card readers, POS devices, printers, QR Code scanners, digital meters, boom barrier, turnstile, etc. to software solutions developed by us. We have used various communication protocols like MQTT, TCP/IP, Serial, Modbus, etc. to communicate with hardware devices.

Empowering your business with your digital presence

Our Services

Mobile App Development

Whether you're a startup looking to ramp up prototype development of your idea using mobile apps or an established enterprise aiming to extend your reach, our team of experienced developers is equipped to turn your vision into a reality. Mobile apps developed by us with the pleasing and convenient UI/UX designs will run/perform optimally for both Android and iOS platforms and will also integrate well with your existing systems/applications.

We develop mobile applications using cross platform technologies which results in lesser development time compared to native application development and quicker turn around.

- ▶ UI/UX designs
- ▶ SaaS application development
- ▶ Backend development
(i.e. API's implementation and 3rd party API integration)
- ▶ Integration of services like payment gateway, maps, location tracking, etc.

Our Services

Remote Teams

It is always a challenge for businesses to Augment a team "On Demand" with competent resources for any of their urgent or transient needs. We have competent and trained developers/resources at our disposal for various technologies whose services can be availed on need basis. Your business will benefit from remote staffing services by gaining access to a global talent pool, reducing overhead costs associated with traditional office setups, and increasing flexibility in scaling their workforce according to project demands.

Why choose us

- ▶ Competent and trained resources available on demand
- ▶ Multiple choices of candidates from which you can choose the resource based on interview/screening process
- ▶ No long term commitment required
- ▶ Reduce over all cost of staffing and hiring

We have placed our resources on multiple technologies namely

.Net

React

NodeJS/TypeScript

Java Stack

SQL
Developer/DBA

Azure Data
Engineering

QA

Manish Shah

We source manpower/technical resources for our ongoing project needs from iKart and we have found the resources hired from iKart to be extremely competent and disciplined. Resources shared with us were extremely professional and integrated well with our project teams. iKart is our preferred outsourcing partner for manpower needs.

Connect Globally, Succeed Locally
Empower your business with the power of Remote Teams

Solutions

ITMS

Demo Video

ITMS stands for Integrated Transport Management System. It is an integrated system meant for the transport hubs for smart cities. ITMS system is developed to elevate commuter's overall experience using the technology and attract more and more people to use mass transport system rather than personal vehicles to their daily commuting. ITMS puts an end to chaotic commuting experience of the user i.e. standing in queue to get tickets, endless waits for buses to arrive, chaos at the time of boarding the bus, etc.

ScanNDo

Scan for
Demo Video

ScanNDo enables restaurant business owners to bring their business online and create their online presence. Apart from this, ScanNDo can also be used to offer touch free ordering/dine in experience to diners at restaurants using QR codes. ScanNDo offers a complete online food ordering experience i.e. browsing of food menu, order cart, payment processing, order status tracking, etc. ScanNDo is an ideal solution for small restaurant business owners to increase their business footprint through online medium.

SmartPark

Scan for
Demo Video

The primary objective of the system is to streamline the process of issuing parking lot tickets and efficiently handling the traffic at exit gates. Our solution provides rapid issuance of printed tickets through POS machines, operates gates automatically upon payment, and calculates the fare accurately based on timing for which parking spot was used. All these results in overall efficient operation and a pleasing experience for vehicle owners. Also, digitizing the process of ticket issuance process plugs the revenue leakages for operators.

Client Feedback

What our delighted customers say..

Kim LeRoy

We had a requirement of fetching data from diverse accounting systems and platforms into our Salesmatrix SWOT product. Each data source required researching, understanding and resolving the technical challenges posed by each accounting system. The team at iKart demonstrated a high standard of technical skills to effect the integration of these different accounting systems. We appreciate the team at iKart for always being accessible, listening and understanding the requirements and ultimately providing quality output our customers can rely on.

George Gitonga

Team at iKart understood our requirements properly and based on that conceived the solution which was perfectly fit to our need. We are highly impressed with the technical capabilities demonstrated by team throughout the implementation of this project and highly recommend them for their professional services.

Janet Fitzgerald

Shout out to the extremely talented team of iKart who did wonderful job at understanding our requirements and did the product development for us which exceeded our expectation. We don't have any team of IT professionals in house but team at iKart has truly worked as extended team. Many complex requirements like report generation, 3d cube designs, image marking, etc. were well understood by the team of iKart and delivered to our utmost satisfaction.

Sandeep Gupta

We had an idea in our mind and the team at iKart helped us to evolve that concept into a fully functional portal. Team at iKart demonstrated excellent skills at each stage of the portal development life cycle and ensured in time execution of the project and most importantly within the budget. iKart is surely a reliable partner to execute your ideas into reality.

Sachin Munot

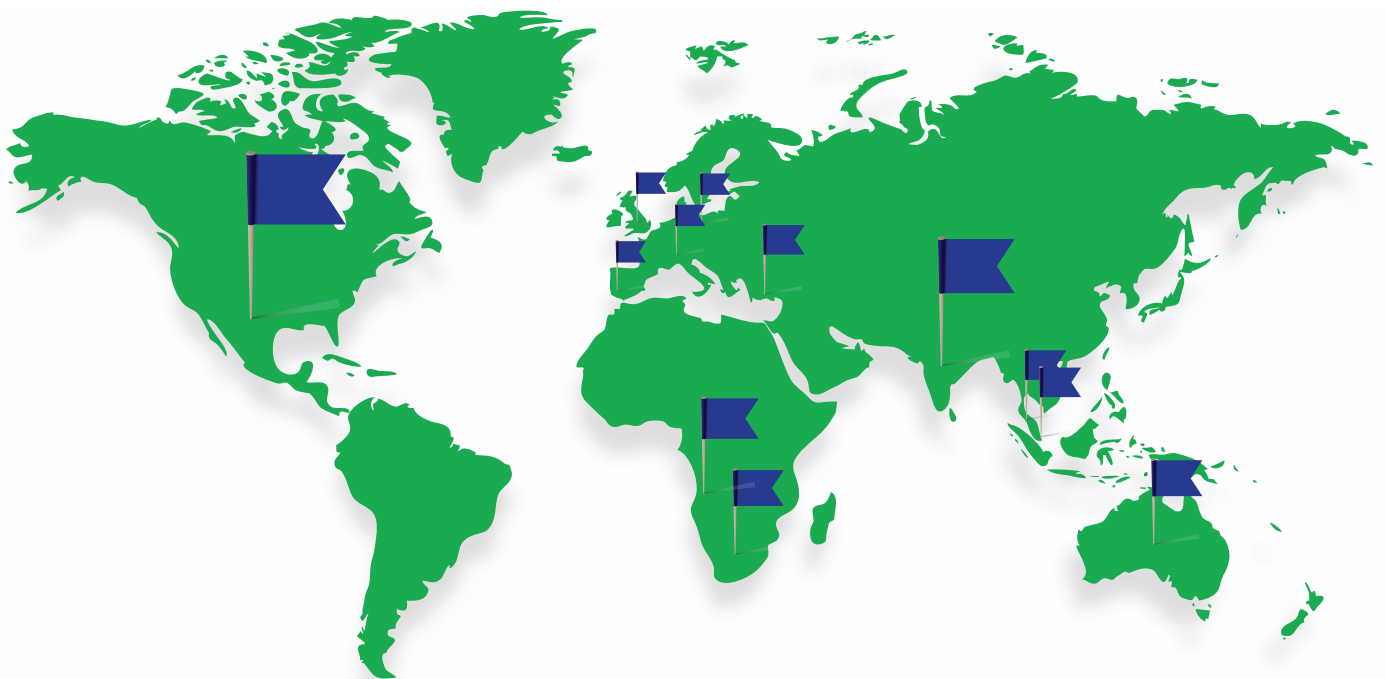

Since last 5+ years, We have been working with iKart for our needs of developing customised software solutions in field of IoT. iKart understands the vision and utility of our products and accordingly develops the solutions that best fits to our needs. We have found the team at iKart extremely competent and recommend them as preferred vendor for software solutions development needs.
